Please read this manual carefully before operation.
The children must operate the vehicle under guidance.

**ELECTRICAL HAZARD**

**WARNING**

- Battery can fall out and injure a child if vehicle tips over. Always use battery retainer.
- **PREVENT FIRE**
- Never modify the electrical system. Alterations could cause a fire resulting in serious injury and could also ruin the electrical system.
- Use of the wrong type battery or charger could cause a fire or explosion resulting in serious injury.
- Use of components in products other than vehicles could cause overheating, fire or explosion.
- The battery must be handled by adults only. The battery is heavy and contains sulfuric acid (electrolyte). Dropping the battery could result in serious injury.
- Never allow children to charge the battery. Battery charging must be done by adults only. A child could be injured by the electricity involved in charging the battery.
- Examine the battery, charger and their connectors for excessive wear or damage each time you charge the battery. If damage or excessive wear is detected, do not use the charger or the battery until you have replaced the worn or damaged part.
- HOT motors. Handle carefully.

---

**RIDING HAZARD**

**WARNING**

Prevent Injuries and Deaths
- Direct Adult Supervision Required.
- Never Ride at Night.
- Keep Children Within Safe Riding Areas.
These areas must be:
- away from swimming pools and other bodies of water to prevent drownings
- generally level to prevent tipovers
- away from steps, steep inclines, cars, roads and alleys.

**Riding Rules**
- Make sure children know and follow these rules for safe driving and riding.
- Always sit on the seat.
- Always wear shoes.
- Only 1 (one) rider at a time.

---

**CAUTION**

- In the unassembled state, this package contains small parts. Adult assembly is required.
- Use the charger in dry locations only.
Please identify all parts before assembly and save all packaging material until assembly is complete to ensure that no parts are discarded.

Some parts were placed under the seat for shipment. Press the tab under the back of the seat and lift to access the battery compartment.

Metal parts have been coated with a lubricant to protect them during shipment. Wipe all metal parts with a paper towel to remove any excess lubricant.
Rear Axle

12 Volt Battery

12 Volt Charger

4 Hubcaps

4 Wheel Covers

4 Bushings

2 Hand Grips

Part Not Shown: Label Sheet
PARTS PICTURE

Note: Some parts shown are assembled on both sides of the vehicle.

1. Vehicle
2. Handlebar
3. Seat
4. 12 Volt Battery
5. Rear Axle
6. Rear Wheel Driver-2
7. Wheel-4
8. Wheel Cover-4
9. Washer-6
10. Cotter Pin-4
11. Hubcap-4
12. 12 Volt Battery Charger
13. Bushing-4
14. Hand Grip-2
15. Plate
16. Steering Column Cap
17. Front Clip
18. Brush Guard
Battery can fall out and injure a child if vehicle tips over. Always use battery retainer.

PREVENT FIRE
- Never modify the electrical system. Alterations could cause a fire resulting in serious injury and could also ruin the electrical system.
- Use of the wrong type battery or charger could cause a fire or explosion resulting in serious injury.
- The battery must be handled by adults only.
- The battery is heavy and contains sulfuric acid (electrolyte). Dropping the battery could result in serious injury.
- Never allow children to charge the battery.
- Battery charging must be done by adults only. A child could be injured by the electricity in charging the battery.
- Read the safety instructions on the battery.
- Examine the battery, charger, and their connector for excessive wear or damage each time you charge the battery. If damage or excessive wear is detected, do not use the charger or the battery until you have replaced the worn or damaged part.

About Thermal Fuses
Your 12 volt battery is equipped with a built-in thermal fuse. The thermal fuse is a self-resetting safety device which automatically trips and shuts down operation of the vehicle if the vehicle is overloaded or the driving conditions are severe. Once a fuse has tripped, remove your foot from the pedal and wait approximately 25 seconds before operating the vehicle again. To avoid repeated automatic shut-downs, do not overload the vehicle by exceeding the 40 kg maximum weight capacity or by toming anything behind the vehicle. Avoid severe driving conditions such as driving up slopes or running into fixed objects, which can cause the wheels to stop spinning while power is still being supplied to the motors and make sure your child stops the vehicle before switching direction.

In a fuse in a battery continually trips under normal driving conditions, please contact your local Service Center.

Important Notes
Your new battery must be charged for at least 18 hours before you use it in your vehicle for the first time.
- We recommend that you start charging your battery before beginning assembly of your new vehicle.
- The battery must be upright while charging.
- The charger is not a toy. Do not short circuit the battery.
- Do not need to remove the battery from your vehicle to recharge it.
- Before charging the battery, examine the battery case for cracks and other damage which may cause sulfuric acid electrolytes to leak during the charging process. If damage is detected, do not charge the battery or use it in your vehicle. Battery acid is very corrosive and can cause severe damage to surfaces it contacts.
- Do not charge the battery on a surface such as a kitchen counter top which could be damaged by the acid contained inside the battery.
- Take precautions to protect the surface on which you charge your battery.
- Use only a 12 volt charger with a 12 volt battery.

Adults Note: Regularly examine the charger for damage to the cord, plug, housing or other parts that may result in the risk of fire, electric shock or injury. In the event of any damage, do not use the charger until it has been properly repaired.
- If your battery is old and will not accept a charge, do not leave it in the vehicle. Always remove a dead battery from the vehicle.
ASSEMBLY

WARNING

Children can be harmed by small parts, sharp edges and sharp points in the vehicle's unassembled state, or by electrical items. Care should be taken in unpacking and assembly parts, including the battery, or help in assembly of the vehicle.

Plug the charger connector into the socket A.
Plug the charger into a standard wall outlet B.

Notes:
- Use the charger only in a wall outlet. Do not plug the AC adaptor into a ceiling outlet.
- If power flow to the wall outlet is controlled by a switch, make sure the switch is ON.

Before first-time use, charge the battery for at least 18 hours.
Never charge the battery longer than 30 hours.
Recharge the battery for at least 14 hours after each use of your vehicle. Do not charge the battery longer than 30 hours.
Once the battery is charged, disconnect the charger connector from the battery. Unplug the charge from the wall outlet. The battery is now ready to be installed in your vehicle. Please see the Battery installation section on page 11 for detailed simply re-connect the motor harness connector to the battery.

Fit a cotter pin into the hole near one end of the rear axle.
Slide a washer onto the rear axle.
Slide a wheel cover, indented side down, onto the rear axle.
Locate a wheel marked L. Slide the wheel, indented side down, onto the rear axle.
Slide a bushing, barrel side down, onto the rear axle. Fit the pegs on the rear wheel driver into the wheel.

Position the vehicle up side down.
Slide the rear axle assembly through the hole in the back end of the vehicle, as shown. Make sure the rear wheel driver fits into the pins in the motor assembly inside the vehicle.

Fit a cotter pin into the hole in the rear axle.
6. Turn the vehicle upright.
. Fit the handlebar steering column and both connectors down through the large opening in the front end of the vehicle.

7. Lift the front end of the vehicle up slightly. Check to be sure the steering column fits through the hole in the steering linkage. Lower the front end of the vehicle.
. Push down on the handlebar assembly to “snap” it in place.

8. While holding the handlebar in place, carefully turn the vehicle over.
. Again, make sure the end of the steering column is through the hole in the steering linkage.
. Fit the steering column cap onto the end of the steering column.
. Insert a screw through the large opening in the steering column cap and into the steering column. Tighten the screw.

9. Slide the plate under the steering column, as shown.
. Insert into the plate and tighten.
10

Slide a washer onto the axle.
Slide a bushing, ring end first, onto the front axle.
Locate a wheel marked L. Slide the wheel, flat side first, onto the front axle.
Slide a wheel cover, indented side out, onto the front axle.
Slide another washer on the front axle.

11

SIDE VIEW

Fit a cotter pin into the hole on the end of the front axle.
Repeat steps 10 and 11 to assemble the remaining washers, bushing, wheel, wheel cover and cotter pin to the other front axle.

12

BOTTOM VIEW

"snap" a hubcap onto the center of each wheel cover.
Turn the vehicle upright.

13

FRONT VIEW

Fit the front clip onto the front of the vehicle, as shown.
Hint: the front clip may already be on the vehicle.
14.
Fit the brush guard onto the front clip.
Insert two screws into the lower holes in the brush guard and tighten.

16.
Fit both hand grips on the ends of the handlebar.
Hint: if it is difficult to slide a hand grip onto the handlebar, moisten the inside of the grip with water.

15.
Insert two screws into the upper holes in the brush guard and tighten.

17.
Locate the opening under the drive buttons.
Reach into the opening and pull the battery indicator connector and high speed connector out through the opening.
Plug the battery indicator connector (with red tag) into the mating connector (with red tag). Leave the high speed connector (with black tag) unplugged for now. See page 17 for information on high speed operation.
Fit the tab at the front of the seat into the slot near the drive buttons A.
Snap the tab at the back of the seat into the slot near the rear of the vehicle B.
BATTERY INSTALLATION

IMPORTANT! Use only a 12 volt lead-acid rechargeable battery. Use of any other battery will damage your vehicle. Make sure that you charge the battery for at least 18 hours using the enclosed 12 volt charger before operating your vehicle for the first time. Charge the battery for at least 14 hours after each use of the vehicle. Never charge the battery longer than 30 hours. Failure to follow these instructions may damage your battery and will void your warranty.

1. Press the tab under the back edge of the seat and lift to remove the seat.

2. Lift the battery retainer to access the battery compartment. Place the battery upright in the battery compartment.

3. Carefully lower the battery into the battery compartment. The battery retainer slides over the battery to secure it.

4. Fit the tab at the front of the seat into the slot near the switch A. Snap the tab at the back of the seat into the slot near the rear of the vehicle B.
BATTERY CARE AND DISPOSAL

Care

If a battery leak develops, avoid contact with the leaking acid and place the damaged battery in a plastic bag. See information below for proper disposal. If acid comes in contact with skin or eyes, flush with cool water for at least 15 minutes and call a physician.

If acid is internally ingested, give water, milk of magnesia or egg whites immediately. Never give emetics or induce vomiting. Call a physician.

Charge a new battery for at least 18 hours before first use. Never charge the battery longer than 30 hours. Overcharging or undercharging the battery may shorten battery life and decrease vehicle running time.

After the first charge, recharge the battery for at least 14 hours after each use. Never charge the battery longer than 30 hours. Charge the battery after each use, regardless of how long the vehicle was used. The battery must be upright while charging.

Do not allow the battery to run down completely before charging.

Charge the battery before storing the vehicle.

Charge the battery at least once per month, even if the vehicle has not been used.

Leaving the battery in a discharged condition will ruin it.

Always remove an exhausted battery from the vehicle. Battery leakage and corrosion can damage the vehicle.

Do not store the battery on a surface (such as a kitchen counter top) which could be damaged by the acid contained in the battery. Take precautions to protect the surface on which you store the battery.

Do not store the battery in temperatures above 24°F or below -23°C.

Use only a 12 volt battery. Remember to charge the new battery for at least 18 hours before first use.

Prevent the battery from moving freely inside the battery compartment. Always use the battery retainer to secure the battery in the battery compartment.

Examine the battery, charger, and their connectors for excessive wear or damage each time you charge the battery. If damage is detected, do not use the charger or the battery until you have replaced the worn or damaged part.

Disposal

Your battery is a non-spillable, sealed- acid battery. It must be recycled or disposed of in an environmentally sound manner.

Do not dispose of a lead-acid battery in a fire. The battery may explode or leak.

Do not dispose of a Lead-acid battery in your regular, household trash. The incineration, landfilling or mixing of sealed lead-acid batteries with household trash is prohibited by law in most areas.

Protect the environment by not disposing of this product with household waste (2002/96/EC). Check your local authority for recycling advice and facilities (Europe only).
SAFE DRIVING RULES

Riding Hazard

WARNING

Prevent Injuries and Deaths
Direct Adult Supervision Required.
Never Ride at Night.
Keep Children Within Safe Riding Areas.

These areas must be:
- away from swimming pools and other bodies of water to prevent drownings
- generally level to prevent tipovers
- away from steps, steep inclines, cars, roads and alleys.

Riding Rules

Make sure children know and follow these rules for safe driving and riding:
- Always sit on the seat.
- Always wear shoes.
- Only 1 (one) rider at a time

Teach safety Rules to Children

While children can quickly develop the skill necessary to drive this vehicle, it is important to remember that their judgment skills are still very immature. Unsupervised driving by children can lead to serious injury. Before children use this vehicle, an adult should carefully evaluate the driving area as well as the children's skill level and ability to drive this vehicle safely. Children are not always able to recognize or anticipate hazards, even when they have been taught about them. There is no acceptable substitute for direct adult supervision. Teach appropriate safety rules to your child before allowing operation of this vehicle. These rules should also be reviewed with neighborhood children or other playmates who want to drive this vehicle.

Riding Rules

Make sure children know and follow these rules for safe driving:
1. Always sit on the seat.
2. Always wear shoes.
3. Only 1 (one) rider at a time. A child who is not sitting on the seat or who is standing on the vehicle could fall off, causing a tip-over or block the driver's view. A child could be seriously injured.
4. Do not allow any child to drive the vehicle in the street or near moving (motorized) vehicles.
5. Do not allow any child to drive near bodies of water (such as ponds or creeks), obstructions (such as furniture, low tree limbs or play equipment), or drop-offs (such as stairs or decks).
6. Do not allow any child to drive in the dark. A child could encounter unexpected obstacles and have an accident. Operate the vehicle only in the daytime or a well-lit area.
7. Restrict your child's driving to areas that are generally level with gentle inclines or slopes.
8. Do not allow your child to drive down or across a steep slope.
   - The vehicle may gain unsafe speed, even if the pedal is released to stop.
   - The vehicle may tilt and tip over.
   - The wheels could lose traction, causing the vehicle to slip.
9. Do not allow your child to drive up steep inclines. The motor may stop and the vehicle could roll backwards at an unsafe speed.
10. Never put anything near any moving parts. Rotating parts such as motors, gear boxes and wheels can snap fingers, hair, etc., causing serious injury. Do not allow operation of the vehicle when it is on its side or in an upside-down position.
11. Do not operate the vehicle near flammable vapors (gasoline, paint thinner, acetone, liquid wax, etc.). The vehicle's electrical switches, like most electrical switches, emit an internal spark when first turned on or turned off. The presence of flammable liquids or vapors could cause an explosion or a fire. Keep all flammable products in tightly sealed containers and away from the vehicle.
12. Do not allow a child to operate the vehicle without direct adult supervision. To prevent unsupervised use of the vehicle, disconnect the motor harness from the battery when the vehicle is not in use.

To disconnect the motor harness:
- Press the rear tab on seat and lift to remove.
- Lift the battery retainer and slowly lower the battery into the compartment.
- Replace the seat on the vehicle.
- Lift the battery retainer to access the battery compartment.
- Pull the connector from the battery.
IMPORTANT! To prevent damaging the motors and gears, teach your child to stop the vehicle before switching direction.

Press the REVERSE button on the tank.

Press the foot pedal. The vehicle backs up at a maximum of 7.5 km/h.

Help your child practice steering to learn how quickly to turn the handlebar when driving in reverse.

Turn the right grip to shift the vehicle into high speed. The vehicle drives forward at a maximum of 7.5 km/h.

Help your child practice steering to learn how far and how quickly to turn the handlebar when driving forward in high speed.

IMPORTANT! Use the vehicle only outdoors. Most interior flooring can be damaged by riding the vehicle indoors. We will not be responsible for damaged to floors if vehicle is used outdoors.

Your vehicle has a patented electronic braking system that automatically stops the vehicle when your child's foot lifts from the pedal. Make sure your child is comfortable with steering the vehicle and automatically knows how to stop.
VEHICLE CARE

Check all screws, cap nuts and their protective coverings regularly and tighten as required. Check plastic parts on a regular basis for cracks or broken pieces.

During snowy or rainy weather, the vehicle should be stored inside or under a protective cover. Remember to charge the battery at least once per month while your vehicle is not in regular use.

An extremely dirty vehicle can be rinsed with a hose but avoid spraying directly into switches motors and battery compartment.

Water or moisture in the motors or electrical switches can cause them to corrode, and could cause switch or motor failure.

Avoid operating the vehicle on sand. Sand in the motors or electrical switches can cause them to jam and could cause switch or motor failure.

The vehicle can be wiped down with a soft, dry cloth. For a shiny finish, you can wipe plastic parts with a non-wax furniture polish applied to a soft-cloth. Do not use automotive wax.

To ensure that your vehicle stays in good operating order, we recommend that you periodically have your vehicle checked by an authorized service center. For the location of the authorized service center nearest you.
## PROBLEMS AND SOLUTIONS

<table>
