MotoTec

Drifter 48v Electric Trike

⚠️ WARNING  Not for under 13 year old

Read this manual completely before riding your electric trike
Motor power: 500 Watt Brushless Hub Motor

Battery: Four 12v 12ah Batteries (48v total)

Max Weight Capacity: 240 Lbs.

Recommended Age: 13 and up

Charger Included

Battery life: Over 300 charges

Rated Speed: 22 MPH (weight dependent)

Range per charge: 20-25 Miles*

Recharge time: 4-8hrs

Climbing Ability: 15 Degrees

Seat: Wide Saddle

Front Wheel Diameter: 70/90-14 78CM

Rear Tires Diameter: 10.4.5-5 27CM

Shipping Weight: 55KGS

Shipping Carton Size: 83*74.5*46CM

Scooter Weight: 93 Lbs

Scooter Dimensions: Length: 41 inches, Width: 28 inches,

Height: 50 inches

Ground Clearance: 2 inches

Safety Instruction (Please take note of the followings before each Ride.)

. The maximum weight capacity is 300lbs.
. Only one person at a time should ride.
. Always wear protective gear including knee and elbow pads and an approved safety helmet when riding the scooter.
. Before riding be sure to check that all pivot points, locking buttons, quick releases, and latches are secured properly.
. The power switch lock must be in the “off” position when the tri scooter is being charged.
. Do not use the scooter when it is raining.
. Do not place the battery near heat or fire.
. Do not expose the charger near water.
. Check if battery after each use.
. Always ride on dry paved surfaces. Wet and uneven surfaces are a hazard.
. Send and loose impediments are your enemy, avoid them.
. Never operate too fast for your skills or condition.
LIST OF PARTS

(1) handlebar
(2) the front wheel motor
(3) the seat
(4) the rear wheels + drift ring
(5) foot
(6) flag
(7) batteries, controller
(8) Turn speed
(9) brake
Are there on the pedal hint left and right
We need to use two screws to fix the left and right pedal.
We have total of 4 plugs, so make sure Connect the same A B C D
ASSEMBLING THE ELECTRIC TRI SCOOTER

1. Unpack the Scooter carefully so that you do not misplace any of the parts.

2. Place the Scooter on a flat, level surface. Using any household item, raise the front base of the scooter up at least 4 so you can easily connect the frame/front wheel to the base.

3. Remove the bolts and nuts from the connecting tubu clamp. Place the connecting tube into the top opening. After aligning the hole, place the two bolts through the connecting tube and neck assembly. Twist the bolts, do not hammer them through. Tighten these two bolts with the nuts provided.
ASSEMBLING THE ELECTRIC TRI SCOOTER

4. The two Allen set screws on the front of the connecting clamp are for removing any play after the bolts have been tightened. First, back of the nuts; second, set the screws; third, tighten the nuts to prevent the screws from backing off.

5. Match the pins of the plugs to the holes of the sockets. Note the alignment notches.
CHARGING THE BATTERIES

Before you ride the scooter for the first time, it is advised that the unit is to be fully charged (4-6 hours) and fully discharged (ride until the battery gauge indicates low battery) for at least three cycles to maximize the efficiency of the battery. After that, you should continue to charge the battery frequently, at least once every 30 days to prolong the battery lifespan.

IMPORTANT:

Do Not leave the battery uncharged for more than 3 months; otherwise it will greatly reduce the battery lifespan.

TIP FOR BATTERU CARE: Charge the battery after each use!
Option 1:
To charge the batteries, plug the charger into the charge socket located on the rear side of the battery/controller compartment. Then plug the charge into a wall outlet.

Option 2: (for professional use only)
Remove the screws from the battery compartment located at the front part of the footboard. Disconnect the wires. Lift the battery box. Connect the battery and charger using the changer convertible cable. Plug the charger into the wall outlet.
RIDING THE TRI SCOOTER

Once you have completed the initial charge you are ready to ride. Remember, this is not a toy. The scooter can reach speeds up to 15.5 mph depending on the terrain and the weight of the rider. You must wear a helmet and protective pads. You must also be aware of all local laws and ordinances that govern and/or restrict the use of powered scooters. The laws and ordinances vary greatly from municipality. It is your responsibility to know and abide by your local restrictions.

To ride, plug the ket into ket ignition and turn the key.
to the “ON” position. The battery gauge will illuminate indicating that the battery is in operation.

Hold onto the handlebars with both hands. Your left fingers will control the brakes and your right thumb will control the thumb throttle. As you depress the throttle lever with your thumb, the speed will increase. Release the thumb throttle and apply the brake to stop the scooter. You will control the speed of the scooter by using both the throttle and the brake. When the brake handle is squeezed, it cuts power to the throttle.

NOTE 1: You may use the balancing wheel (the smaller rear wheel) to balance the scooter when you want to ride with the front wheel raised.

WARNING: Never try stunts beyond the control of your skills. Never ride too fast for your skills or condition.

NOTE 2: When scooter is parked, press the power switch button, to the “OFF” position; this will avoid anyone from accidentally pushing the throttle causing the scooter to speed forward. Failure to do this could lead to an accident.

FOLDING THE TRI SCOOTER

1. Unplug the power connecting plugs.  
2. Unscrew the bolts and nuts from the connecting tube clamp using the enclosed allen wrenches.  
3. Lift the connecting tube (which is also attachment to the handlebar tube).  
4. Carefully place the handlebar tube on the footrest frame.  
5. Finger screw the bolts an nuts back to the connecting tube clamp to avoid any misplacement.
MAINTENANCE

Battery:(for professional use only)
The scooter is powered by 31Ah 36V rechargeable batteries secured in a battery bag. Other than recharging, these batteries need no maintenance. To prolong battery life, you must recharge the battery after each use. You must also charge your scooter if it has not been used for 30 days or more. If you must replace the batteries, they are located at the battery compartment at the footboard. To get them, remove the batteries with new ones and reconnect the wires. Follow the instructions on charging batteries to charge the new batteries.
